

APC 60 Cove Trim

The B.A.T. APC 60 Cove Trim's sole purpose is to provide a radius where tiles, or other floor coverings have already been installed and meet at the junction of floors and wall. The APC 60 has been designed in consultation with architects and local health departments and satisfies all current health authorities requirements.

The APC 60 can either be installed on top of existing tile works, or under installations of materials such as vinyl where a radius finish is required without the obvious appearance of a Cove Trim.

The APC 60 is installed by applying a bead of silicone, (as illustrated) and pressing the Cove Trim firmly into place to create a sealed surface.

Prefabricated internal and external 90° corners are also available for the APC 60 in all stocked colours.
